

Student Team from CEC Wins Honorable Mention in the 2023 PA Governor's STEM Competition

Mr. Derick Tilburg's class at the Central Education Center worked this year to solve the challenge of truck parking. After researching the issue, students worked together to develop an innovative phone application to increase commercial truck parking availability and offset costs incurred for construction. The application allows truck drivers to reserve parking spots, access bathrooms and showers with a QR code, find local amenities, chat with other drivers, and much more! In addition to developing the application, students conducted research and interviews, wrote a proposal, and submitted a presentation to the competition.
