

Here's what teachers are doing..

CTCs and Vocational Schools

The OTDA grant provides CTC and Vocational school educators with funding for valuable experiences! Teachers can take their students to view live heart surgeries at local hospitals, connect and interact online with professionals performing live autopsies, purchase all types of science kits, animal organs to dissect, materials for CPR classes, heart monitors, and so much more!

They have also involved other areas of study such as their graphic arts and woodworking students to help create "corn hole" organ games to encourage all students to learn about organ donation. Use the funding to order wood, vinyl, equipment needed for your classroom and the OTDA grant will cover it!

This grant gives you the flexibility to use its funding creatively while supporting your efforts to spread awareness!
